

# Remote Controlled HF Antenna

## Remote Controlled HF Antenna Switch

### Overview

The Remote Controlled HF Antenna Switch is a high-performance RF switching solution designed to remotely select among multiple HF antennas from your shack or control point — eliminating manual rooftop visits. Ideal for amateur radio, base stations, remote communication sites, and professional HF installations. This RF antenna switch combines rugged construction, excellent electrical performance, and reliable remote control — enabling seamless selection of HF antennas without manual intervention. Similar professional units operate from DC up to 54 MHz or more, and allow multiple antennas to be connected to one transceiver with excellent isolation.

## Electrical Specifications

|                   |                                            |
|-------------------|--------------------------------------------|
| Frequency Range   | DC – 54 MHz (typical HF)                   |
| Ports             | 6×1 or 8×1 (varies by model)               |
| Power Supply      | 12–14 V DC                                 |
| Insertion Loss    | ≤ 0.2 dB                                   |
| Switching Time    | ≤ 12 ms                                    |
| Power Handling    | Up to 4 kW+ (optional high-power variants) |
| Connectors        | SO-239 / N / UHF / Custom                  |
| Control Interface | RS-232 / BCD / Wired Remote / Optional     |

---

## Mechanical Specifications

- Heavy-duty aluminum enclosure
  - Mounting brackets & weather sealing
  - LED indicators for active antenna selection
  - Grounding protection on all unused ports
  - Suitable for outdoor, rooftop, tower or remote site installations
- 

## Key Features

- ✓ Remote Operation
- ✓ Multi-Antenna Support
- ✓ Wide Frequency Range
- ✓ Low Insertion Loss
- ✓ Automatic & Manual Operation
- ✓ Durable Construction
